Abstract (en)

[origin: WO2009000738A1] The invention proposes a windscreen wiper blade holder (10) which comprises a supporting mount (12) of mainly longitudinal orientation and a wiper blade (16) that is supported by the mount (12), in which the mount (12) comprises an upper tubular body (18) and longitudinal hooks (18) which extend vertically downward from a bottom horizontal face of the body (18), and which delimit a downward-opening bottom housing (30) which receives a portion of the blade (16) and in which the blade (16) comprises a top mounting log (32) which is received in the bottom housing (30) of the mount (12) and a bottom wiper lip (34) that is capable of coming into contact with a glazed panel (36) to be wiped, characterized in that the top log (32) is capable of moving vertically in the bottom housing (30), and is capable of deforming vertically, at the same time as the vertical deformation of the lip (34), according to the curvature of the glazed panel (36).
