Abstract (en)

[origin: WO2009010524A1] The invention relates to a method for packaging packaged goods (2) in a packaging material (4, 14), which surrounds the packaged goods (2) at least partially, the packaging material (4, 14) being unwound from a reel (9, 15) having at least one readable data memory (5) for material data, characterized in that the material data is read from the data memory (5) and processed, wherein at least one of the two following actions is performed: A) Regulating the packaging process as a function of the material data and B) creating a product pass based on the material data. The method according to the invention reduces the possibility of operating errors when packaging packaged goods (2) with packaging material (4, 14). The packaging process is more transparent due to the method according to the invention, and can be tracked and/or reconstructed even at a later time.
