Abstract (en)
[origin: WO2009016572A1] Disclosed is a bag having a front surface (12); a rear surface (14),- two side surfaces (18) each having a gusset therein and connecting the front and rear surfaces; a flattenable bottom surface (16) formed by connecting the front, rear, and side surfaces; and a top surface (22) formable by connecting the front, rear, and side surfaces. The bag has a height, a width, and a depth, and defines an internal volume. The bag is sealable and has a seal strength of at least about 1,600 pounds per square inch. The bag is formed from a plastic laminate having a thickness of from about 130 to about 200 microns and a tensile strength of at least about 3,400 pounds per square inch. The bag contains at least about 15 pounds of a particulate, flowable composition. The bag can also have a closure system comprising a non-reusable closure and a reusable closure. Also disclosed is a method, using the bag, of enhancing palatability of an oxidizable, particulate, flowable composition contained therein.
