Abstract (en)

[origin: WO2009012951A1] In order to provide an article carrier with a dividing arrangement (9) which is flexible in terms of height, rests on the base (8) of the article carrier and has profiled side walls (70, 71) with undercut grooves (76) running parallel to the base (8), and has at least one partition (70, 71; 80) for inserting between the side walls (70, 71) and right-angled corner connectors (20) which can be latched into the grooves (76), it is proposed that the side walls (70, 71) have an undercut projection on their top side or their bottom side, and a latching profile for latching with the projection on their bottom side or top side.
