Abstract (en)

[origin: WO2009005393A1] The invention relates to the field of ecology, particularly to the technology of natural water purification during water conditioning and physical-and-chemical wastewater treatment from toxic compounds of natural and technogenic origin involving various coagulants, and it could be used for human state improvement and health maintenance and for environment protection. The fundamental distinction of the claimed invention from the prior art consists in obtaining the new coagulant for natural water purification and high-level disinfection. The technical result consists in obtaining high-quality potable water with properties being stable for a long period of time in achieving the effective, long-term and reliable waste water purification for the purpose of providing human and environment ecological safety. After 30 minutes of disinfecting titanium coagulant action, the sharp suppression of infection activity of the human rotavirus, hepatitis A virus proceeds, as well as severe suppressing impact on the noravirus.
