Abstract (en)

[origin: WO2009014428A1] The invention relates to a bolt housing having a bolt module, wherein, briefly said, - the bolt module comprises a bolt that can rotate around an axis, - the bolt module is movably mounted in the bolt housing between a first terminal position of the bolt module wherein the bolt is brought maximally outside the bolt housing and a second terminal position of the bolt module wherein the bolt is brought maximally in the bolt housing, and - the bolt that is rotatable around the axis is in the absence of a force exerted on the part of the bolt that protrudes outside the frame in a position of rest situated between the first terminal position of the bolt and the second terminal position of the bolt, and an organ exerts a force on the bolt in the direction of that position of rest. The invention also relates to a bolt module.
