Abstract (en)  
[origin: WO2008153225A1] A disclosed is a hinge damper attached to a hinge of furniture equipped with a door to absorb a strong impact even if the damper has a small size. The hinge damper absorb a strong impact even if the damper has a small size by forming first and second seals inside an oil seal of a conventional hinge damper to prevent air from being introduced and forming a cross-type rib on a piston. The hinge damper damps a strong impact even in a small size. The hinge damper is formed such that any influence is not exerted on the size of a hinge. The hinge damper has a size corresponding to the size of a screw fixing the hinge, so that the hinge damper is not exposed to an exterior.
