Abstract (en)
[origin: WO2009013129A2] The invention is based on a refrigerator with a door bearing for fastening a pivot-open door (2) of the domestic refrigerator. The door bearing has a fastening element (9), by means of which it is fastened on the housing (1) of the domestic appliance, and a bearing element (6), which is connected to the fastening element (9) via a bearing arm (3) and by means of which the door bearing engages in the door (2). According to the invention, when the door (2) is open, the bearing arm (3) is located in a position in which it is offset in height in relation to its rest position, which it assumes when the door (2) is closed.
