Abstract (en)

[origin: WO2008009731A1] The invention relates to a coil arrangement having a tube-shaped coil support of an electromagnetic drive, particularly a two-stage engaging relay, wherein the coil arrangement comprises a hold-in winding and a pull-in winding, and wherein the coil support comprises at one end thereof a first delimitation and at the other end a second delimitation, the hold-in winding being disposed in between, wherein the first delimitation (3) on the side (6) thereof facing the second delimitation (5) comprises an axial recess (7) for receiving the pull-in winding (22).
