Abstract (en)  
[origin: CA2691035A1] The invention relates to a cable routing device intended, in particular, for the routing and distribution of electric cables, having an elongate structure (1) with a U-shaped cross-section, formed by the assembly of two side posts (3) forming the arms of the U and a base (2) forming the base of the U. The side posts (3) and the base (2) are made substantially from a composite material and/or a reinforced plastic material and at least one side post (3) is pivot-mounted to the base (2) about an axis of rotation (30) by means of at least one hinge (4). The invention also includes snap-coupling means and abutment means capable of locking the side post perpendicularly to the base (2) by rotational force.
