Abstract (en)

[origin: WO2009010572A1] The invention relates to a hearing aid that is to be placed on and/or inside an ear and comprises a microphone (1) for converting acoustic signals into electric signals, a hearing module (3) for supplying the electric signals, and a loudspeaker (4) for converting the electric signals output by the hearing module (3) into acoustic signals. The hearing module (3) is fitted with a noise suppressing device which estimates noise in order to determine a signal-dependent filter and supply a noise-reduced output signal.
