Abstract (en)
[origin: EP2172582A1] The device (1) has a two-piece fiber guidance channel with an output channel section integrated into a channel disk adapter. An input-side channel section is arranged in a releasable roller housing (19), which is pivotably mounted in a limited manner. The channel disk adapter is pivotably mounted relative to a center axis (20) in a limited manner. The channel disk adapter is positioned independent of size of a tower-like attachment piece. Central longitudinal lines of the channel sections of the fiber guidance channel are arranged in an angle position to each other.
