Abstract (en)
[origin: EP2172599A2] The light housing has a framework provided with two frame parts (1, 2) i.e. profile bodies, that are made of aluminum. Two connecting elements (3, 4) are connected with the frame parts, respectively, where the connecting elements comprise pointing hooks for a mutual form-fit connection. The pointing hooks for the mutual form-fit connection are formed in such a manner that the pointing hooks are moved for making the form-fit connection of one of the connecting elements (3) with respect to the other connecting element (4) in a direction.
