Abstract (en)
[origin: EP2172949A1] An actuator (100) comprises a housing (101) and a drive mechanism arranged therein. The drive mechanism is provided for moving a position member (103). An outer end (105) of the position member is designed to move a movable component. The actuator comprises a pin element (120) that projects from the housing and has a face that is designed to rest against the movable component to prevent a rotation of the movable component.
