Abstract (en)  
[origin: WO2009008827A1] A dishwasher comprising a spraying system (16) having spraying arms which are rotatably attached to a hub (19) adjoining a washing basket which is displaceable in the depth direction through the opening and is transposable in the height direction. A spray feed pipe supplies washing liquid to the spraying arm, the spraying system incorporating a coupling device (25) for the disconnection and connection of the spray feed pipe to/from the spraying arm in order to allow, on the one hand, the displacement motion of the washing basket in the depth direction and, on the other hand, the transposability of the washing basket in the height direction. The coupling device consists of alternative coupling members (30, 31) for the respective height position, and a coupling part (26) which is fixed relative to the housing and a coupling part which is movable together with the washing basket. Said movable coupling part is attached to the hub (19) for the spraying arm (18) on the height-adjustable washing basket (9), and the spray feed pipe has a fixed spray pipe part (24) projecting from a wall in the dishwasher housing, in the pushed-in position of the washing basket, as far as the hub. The fixed coupling part (26) is fitted on the hub-facing end (27) of the projecting spray pipe part (24).
