Abstract (en)

[origin: WO2009013040A1] The invention relates to a hand machine tool (10, 100), in particular a right angle grinder, with machine housing (12, 120), on the clamping neck (14, 120) of which a protective hood (18, 180, 1800) can be fastened preferably by means of the clamp (28, 280, 2800) thereof which can be fixed to the protective hood body (22, 220, 2200). In particular, a positive-fit coding mechanism between the hand machine tool (10, 100) and the protective hood (18, 180, 1800), without which the protective hood (18, 180, 1800) is not mountable on the correspondingly assigned coded hand machine tool (10, 100), is characterized in that the defined coding mechanism (24, 240, 2400; 26, 260, 2600) which has in particular an interlocking, key-keyhole-type positive fit, is arranged between the clamp (28, 280, 2800) and the protective hood body (22, 220, 2200) in the area of a provided mutual fastening, without which coding mechanism the clamp (28, 280, 2800) cannot easily be fixed to the protective hood body (22, 220, 2200).
