Abstract (en)

[origin: FR2919579A1] The container (1) has a bottom (8) extended at an end of the container. The bottom has a deformable annular membrane (11) in the form of a spherical cap and extended from an annular step (10) perpendicular to a cylindrical body. The step is extended from an annular base (9) towards interior of the container. A pin (12) is extended in projection at the center of the bottom towards the interior of the container and in an extension of the membrane. The membrane, step, base and a lateral wall of the pin are made of crystalline. An amorphous pellet is located at the center of top of the pin.
