Abstract (en)
[origin: US2010175200A1] An apparatus for the treatment of strand-shaped textile products in the form of a continuous material strand which is circulated at least during part of the treatment, includes an elongated, essentially tubular treatment container and a transport nozzle array that can be charged with a gaseous transport medium stream. In the treatment container is arranged, adjoining a material strand inlet, a storage section for receiving a piled-up material strand package corresponding a sliding floor that is inclined, at least in sections, in a manner descending from pile-up means toward a head part of the treatment container. In the region of the transport nozzle array means are provided in order to charge the material strand at least in the region of the transport nozzle array with a liquid treatment agent.
