Abstract (en)
[origin: WO2009018800A2] The invention relates to a wireless tracking and monitoring system (1), comprising at least one mobile unit (ME1, ME2) and at least one central unit (ZE), wherein each mobile unit (ME1, ME2) has at least one first communication component (K1) for communicating with the central unit (ZE), wherein each mobile unit (ME1) has at least one sensor (S1, S2), and wherein a position determination can be performed by at least one of the sensors (S1, S2) via a position determination system (POS). To this end, each mobile unit (ME1, ME2) has a second communication component (K2) for communicating with the central unit (ZE) or a target unit (Z1, Z2), wherein the first and second communication components (K1, K2) of the mobile unit (ME1) can be operated simultaneously.
