## Abstract (en)

The device has several compartments (16.1-16.4) positioned adjacent to one another for accommodating a receptacle. The compartment is bounded by walls (22.1-22.5) extending parallel at a distance from one another. A fluid is circulated through portions of the walls having co-operating connectors for fluid lines. One wall of the compartment is displaced in a direction perpendicular to the other walls. The wall is displaced in a direction perpendicular to the walls against the action of a spring element e.g. compression spring. An independent claim is also included for a container comprising a thermally isolated housing.

## Abstract (de)

Die Erfindung betrifft eine Einrichtung und einen Container zur Aufnahme, Befüllung, Temperierung, Lagerung, Entleerung und zum Transport von Behältern für biologische, biochemische und biopharmazeutische Substanzen, insbesondere Flüssigkeiten.
