Abstract (en)

[origin: EP2175210A2] Heating device comprises an exhaust gas monitoring unit (8) having a thermoelectric generator (9) with a heat-conducting connection (10) to the inside of the heating device. The generator is arranged at a site which is circulated and cooled by air from the surroundings of the device when the burner (1) is fired under normal a regulating operation of the device and is circulated and heated by the exhaust gas from the heating device in an unacceptable operation state. An independent claim is also included for a method for operating the heating device. Preferred Features: The generator has two regions A and B and the heat-conducting connection is arranged between the region A of the generator and the inside of the heating device.
