Abstract (en)

[origin: EP2175423A2] The method involves collecting and storing breakdown data of assemblies (2) and components (3) of a vehicle (1) in computers (5, 7, 8), where the data is produced through false operation, maintenance and repair of the vehicle. The data is transmitted to a central computer (9), and a breakdown data analysis is executed in the computer (9) by a detailed evaluation of the data. Operation and breakdown data corresponding to situations in the usage of the vehicle are provided, and a serial number, software version and part marking of the vehicle are stored in a radio frequency identification chip.
