Abstract (en)
[origin: EP2175461A2] The device has current conductive elements (10, 12) conductively connected with each other during an operating process, where current flows through the conductive elements during the operating process. A mounting unit (14) i.e. slide bearing, movably mounts one of the current conductive elements relative to the other current conductive element. The former conductive element is provided with a coupling unit (16) i.e. plug connection unit, and the later conductive element is formed as a board conductive path.
