Abstract (en)

The invention relates to a mechanical reclosable fastener component for mechanically and electrically connecting electrical and/or electronic components to each other and comprises at least two segments 1 each segment with a body portion 2 and fixing elements 3 protruding from at least one side of the body portion 2, the segments 1 providing at least one conductive area 7, wherein the segments 1 are arranged such that the body portions 2 are parallel to each other and the fixing elements 3 on a side of the body portion 2 of the at least two segments 1 are oriented in the same direction. The invention further relates to a method of making a mechanical reclosable fastener component as well as to a connector comprising a mechanical reclosable fastener component.
