Abstract (en)

A dimming circuit (10) includes a resonant unit (11), a rectification unit (21), a half-bridge output unit (31), a first switch device (DD1) and a second switch device (DD2), and a selection unit (41). The rectification unit (21) is connected to the resonant unit (11). The half-bridge output unit (31) includes a first electric-controlled switch (Q1) and a second electric-controlled switch (Q2) in series. The first and second switch devices are connected to the second electric-controlled switch. The selection unit (41) may turn on the first switch device (DD1) and the second electric-controlled switch (Q2) when a potential is rising that turns on the discharging lamp (99) and turn off the second switch device (DD2) and keep turning on the second electric-controlled switch (Q2) when the discharging lamp (99) is lighting. The selection unit (41) further turns on the second switch device (DD2) to turn off the second electric-controlled switch (Q2) for turning off the discharging lamp (99) in a low power condition.
