Abstract (en)

[origin: US2009038981A1] To monitor the intake of medicaments present in wafer form, a device is made available which is suitable for storage and provision of such forms of administration. This device comprises medicament pouches, which are arranged as a stack of pouches and contain medicament wafers, and it has the following features: a) the device has a support 9 which extends parallel to an edge of the medicament pouches 1 and on which date indicators are arranged, b) a marking 20 is arranged on each of the medicament pouches 1 in such a way that markings 20 arranged on successive medicament pouches 1 in the stack of pouches are each in alignment with successive date indicators. This ensures monitoring of the intake of the wafers.
