Abstract (en)

[origin: WO2009019386A2] The invention relates to a device for conveying flat items (1) that comprises at least two wheels (R1, R2, R3) with an elastically deformable tread arranged opposite each other in order to move a flat item by clamping and friction. Both wheels are arranged so as to apply a clamping force on the flat item that is progressive consistent with the movement of the flat item.
