Abstract (en)
[origin: WO2009019376A2] Disclosed is a method for structuring a surface, i.e. forming at least one system of designs having a characteristic size on at least one partial surface of a substrate that has a glass function. Said method is characterized in that a solution comprising at least one precursor of a material to be deposited is decomposed within a flame at atmospheric pressure, said flame being directed to said partial surface such that a mask is deposited thereon in the form of a plurality of nodules made from said material, and the mask made from said material is engraved.
