Abstract (en)

[origin: WO2009022078A2] The invention relates to a method for producing an insert (1) that comprises at least one flexible substrate, a second flexible substrate associated with the first one and an RFID device at least partially provided between the two substrates, the method comprising the steps of: depositing at least one adhesive on a face of at least one substrate, the other substrate bearing at least one active substance; assembling the substrates, the active substance being capable of triggering or accelerating the reaction process with the adhesive.
