Abstract (en)  
[origin: WO2009021668A1] The invention relates to an internal combustion engine valve train switching device having a switching unit (36). The invention provides that the switching unit (36) has at least one actuating unit (38) having at least two switching units (1, 2) and at least one switching means (3, 4), which is provided to actuate the at least two switching units (1, 2) in at least one operating mode in an at least partial chronological offset.
