Abstract (en)
[origin: WO2009015952A1] Data obtained by a tachograph (DTCO) and stored in a memory (SP) of the tachograph (DTCO) in a first memory region (SPB1) in a predetermined first data format (DF1) is processed according to a predetermined processing rule and is stored in a predetermined second data format (DF2), which differs from the predetermined first data format (DF1), in a second memory region (SPB2). At least part of the data stored previously in the second memory region (SPB2) is read depending on an inquiry (A) of an external reading unit (LE) in relation to the tachograph and is put out via a data interface (DS) of the tachograph (DTCO) while maintaining the predetermined second data format (DF2).
