Abstract (en)

[origin: WO2009015814A2] The invention relates to a method of provisioning an account in a subscriber database of an IP multimedia subsystem communicatively connected to a provisioning system for managing provisioning requests. First, a status regarding earlier use by a subscriber of the IP multimedia subsystem is checked. If the checking reveals that the subscriber is a user or potential user of the IP multimedia subsystem, a subscriber account is added in the subscriber database, and a reference to the subscriber account is stored in the provisioning system. If the checking reveals that the subscriber is not a user or a potential user, a subscriber account associated with the subscriber is updated in the subscriber database with updated information.
