Abstract (en)

[origin: EP2177292A1] The device (1) has an opening and closing unit opening and closing an upper frame (4) and a lower frame (3) and integrated with an adjusting unit (6). The adjusting unit adjusts position of upper straightening rolls (40), and moves the upper frame relative to the lower frame in a translation movement perpendicular to the frames. The adjusting unit comprises guiding elements (60) for guiding the upper straightening rolls in vertical translation. An actuator (72) e.g. servomotor, is coupled to a fixed rotation axle (A) of a cam (71).
