Abstract (en)
[origin: EP2177441A1] The container has side wall elements (3a, 3b) connected with each other by base sections (4-6) that are designed symmetrical to a base fold line (7), where the container is formed by a folding box (2). The wall elements respectively have two connection flaps (8a, 8b) connected to the wall elements in an articulated manner. Outer surfaces (10b, 11b) of the respective connection flaps are connected with each other such that the connection flaps point in a direction of an interior of the container. A bag with a film of plastic is connected to the side wall elements on the connection flaps. An independent claim is also included for a method for producing an upwardly opening dimensionally stable packaging container.
