Abstract (en)
[origin: EP2177473A1] The device has a transportation unit (2) for transporting objects (10) i.e. containers, along a transport path (P), where the objects are transported in a sterile room (8). The transportation unit is positioned completely inside of the sterile room, and another transportation unit (4) is located completely outside of the sterile room. The transportation units are arranged in a transitional area (B) along the transport path. A divider (12) is provided between the sterile room and a room located outside of the sterile room. An independent claim is also included for a method for treating objects.
