Abstract (en)
[origin: EP2177661A1] The device has a filter device (3) for separating particles i.e. fibrous materials, from an air stream. The filter device has a filter element (31) i.e. lint filter, and a cleaning device for cleaning the filter element. The filter element is designed in a tubular manner. An air inlet is provided at a front side of the filter element. The cleaning device is designed as a scraper (32) and arranged within the tubular filter element. The scraper is designed in a helical shape, and supported in the device in a rotatable manner. The scraper corresponds to inner circumference of the filter element.
