Abstract (en)
[origin: EP2177672A2] The present invention relates to a drain hopper, associable to a collection device, for example a bath, comprising an overflow hole. The hopper comprises a drain funnel, able to engage a seat of the collection device in such a way as to make a liquid flow inside it, the drain funnel comprising a drain compartment extending around a first axis. The hopper comprises, in addition, a manifold, able to receive the liquid from the drain funnel and comprising an overflow duct, connected fluidically with the overflow hole, such overflow duct extending around a second axis incident to the first axis. In addition, the drain funnel is shaped so as to form a prismatic coupling with the seat of the collection device and the manifold is engaged tight to the drain funnel so as to freely rotate around the first axis.
