Abstract (en)
[origin: WO2009004468A2] This utility model discloses an air bed, a folding bed and folding bedstead. The folding bedstead comprises at least two left-right paralleled rows of legs, each pair of adjacent front and back legs of the two rows are connected with a sub-plane frame and the sub-plane frames are pivot-connected in tandem series to form an organ-type folding general bedstead. Both the air bed and folding bed are provided with this kind of folding bedstead. The general bedstead comprising sub-plane frames connected in organ-type folding manner has eliminated the defects in the background art and has the following advantages: 1) it is fully foldable along the length and therefore occupies only a small space; 2) The sub-plane frames of the bedstead support the mattress in a stable way and do not damage the mattress.
