Abstract (en)
[origin: WO2009021482A1] The invention relates to an illuminating device for vehicles, in particular a tail light, with a housing containing at least one light source, a support accommodating the light source, and a reflector, and with a diffusion lens for covering an opening of the housing, characterized in that the reflector, which is provided with an electrically conductive coating, is assigned charge dissipation means in such a manner that, when electrostatic charging of the reflector occurs, a dissipation current flows to a connection to earth of the illuminating device.
