Abstract (en)
[origin: CA2695392A1] The invention relates to a system adapted for printing and for consecutively placing in boxes moving on a conveyor, documents of the slip type (11) in correspondence with the boxes and with the products to be received therein. The system (6) comprises, at the outlet (12) of a printer (5) supplying documents (11) in the form of one or more printed sheets for each box, advance and storage means (13, 14) with a succession of locations (19,20,21,22) for receiving the sheets, between which the documents (11) advance step by step. Means (27, 28) for transferring the documents (11) to the boxes are provided at the last location (22). The advance and storage means (13, 14) define a flat U-shaped path. The system is intended for order preparation lines.
