Abstract (en)

[origin: CA2699433A1] The present invention relates to the use of polynucleotides with a length of from 2 to 100% of the number of nucleotides of the individual sequences shown in SEQ-ID No. 1 to SEQ-ID No. 69 and/or the gene loci thereof and/or the transcripts thereof for detecting gene activities for distinguishing a condition associated with a local infection from a condition associated with a systemic infection in a patient, using all the sequences shown in SEQ-ID No. 1 to SEQ-ID No. 69; and to a method and a kit for carrying out the method.
