Abstract (en)

[origin: WO2009021744A2] In the case of an arrangement for determining the oil consumption of an oil-lubricated machine, such as an internal combustion engine, a compressor, a turbo charger (33), a pump or the like, the arrangement comprising an oil circuit (11), which leads from an oil tank (3) via a starting line (13) to the working machine and back via a return line (37) to the oil tank, and a balance (7) for determining the weight of oil (5) in the oil tank, it is provided that a device (25) for heating oil (5) is assigned to the starting line in such a manner that the oil (5) can be heated to a predeterminable operating temperature for the working machine before reaching the working machine.
