Abstract (en)

[origin: WO2008155360A1] The invention relates to a contactor carriage intended to be fitted so as to move translationally in an electrical switch (1) of a motor vehicle, preferably in a unit providing controls under the steering wheel, in order to establish according to a user command, an electrical contact for one or more predefined positions of the path of said carriage (3), comprising at least one electrical contacting emplacement (13), characterized in that it comprises a first housing (15) intended to accommodate a high-current contactor element (12) and a second housing (17) intended to accommodate a low-current contactor element (11), in such a way that an electrical contact is able to be established at said emplacement (13) either by placing a high-current contactor element (12) in the associated housing (15, 17) or by placing a low-current contactor element (11) in said housing.
