Abstract (en)

[origin: EP2179952A1] The method involves supplying an after-dragged or slotted product along a guide line in a shed stream after closing the shed stream in a supply flow (9) and leaving the guide line with a pass through of a supply area (11) with one below the product. An independent claim is included for a device for joining two flat products partly one above the other, particularly printing products with a supplied product.
