Abstract (en)

[origin: EP2180383A1] The device has locking levers (52, 52') maintaining jumpers (50, 50') out of correction phases of date indication, respectively. The levers move aside from a locking position of the jumpers by an activation unit (54) for liberating the jumpers in correction phases of the date indication, respectively. Each lever is locked between corresponding jumper and the activation unit out of the correction periods of the date indication. The lever is provided with diametrically opposite arms (53a, 53b) that allow the lever to be supported against the jumper and a toothed wheel.
