Abstract (en)

It consists of a key in an elastic material -1- ending, at its lower end, in a projection -2- and an appendage by way of a flap -3- joined to the inner part of the base -1a- of the key -1- by the connecting point -4-, which permits the displacement of the entire appendage -3-, bringing it closer to or away from the base -1a- of the key, thus returning to its initial position, depending on whether said appendage -3- is pressed or ceases to be pressed.

Said appendage -3- features a lip -5- which occupies the outer half of its end and is arranged outwards, the outer surface -3b- of the appendage -3- lying behind the lip -5- and the rest of the surface, completely flat and smooth, continues until a curvature -3a-, a surface which rests, tightening and sliding, upon a stub -6- of the body -7- of the mechanism in the inner area of a flange -8a- in the lower part -8- thereof.
