Abstract (en)

[origin: EP2180723A1] The device has a receiver (25) for converting an electrical signal into acoustic signals. An earpiece (22) is adjusted to an auditory canal of a user when the hearing device e.g. behind-the-ear hearing device, is worn by the user. A base part (20) fastens the receiver and the earpiece, where the receiver and the earpiece are moveable in respective to the base part, where the base part comprises a bendable bar to fasten the receiver. A shell (24) is arranged at an end of the bendable bar on a side of the receiver to fasten the receiver. An independent claim is also included for a hearing device, comprising a housing.
