Abstract (en)
[origin: WO2009010366A1] A girder (1) for reinforcing structural members made of reinforced concrete is described, the girder comprising at least one truss (2) and being provided with at least one lateral protrusion (4, 5) in correspondence to its ends. A method for connecting two girders (1, 1'), being substantially arranged along the same direction, to a reinforced concrete pillar (7) is also described, wherein at least one short reinforcing member (9, 10) is arranged aside the girders (1, 1') in correspondence to the pillar (7).
