Abstract (en)  
[origin: WO2009021786A1] The invention relates to an electric circuit configuration (4) having at least one first circuit device (1) and at least one second circuit device (3), the two circuit devices (1,3) being electrically connected to each other by intermediately connecting at least one transfer device (2). According to the invention, the transfer device (2) is electrically connected to the first circuit device (1) by means of conductive adhesive connections (32), and the transfer device (2) is electrically connected to the second circuit device (3) by means of conductive adhesive connections (32) and/or soldered connections (29). The invention further relates to a method for producing a corresponding electrical circuit configuration (1).
