Abstract (en)

[origin: EP2181960A1] The beverage dispenser has a coolness aggregate (11), a heat sink (12), and a flexible beverage bag with outlet hose (14), a cover (16) and an agitator (18). The heat sink is formed in cylinder or truncated cone form, and a lattice cage is provided, where flexible bags filled with beverage are provided. The lattice cage reduces complete surface contact of the flexible bag with the heat sink, and provides inherent stability to the beverage and beverage bags (10,13).
